SUMMARY

Software engineer and M.S. Computer Science (Artificial Intelligence) student at USC, graduating December 2027, who owns projects end to end and ships them to real users. Shipped React and Angular front ends on Python REST APIs to production at Ford, debug a live Flutter and FastAPI app on Azure at Keck Medicine of USC, and traced LLM failures to their root causes at Qualcomm. Uses AI coding tools like Claude, ChatGPT, and GitHub Copilot, and reviews and understands every line before it ships.

EDUCATION

University of Southern California, Los Angeles, CA | M.S. Computer Science (Artificial Intelligence) | GPA: 3.65/4.0 | Jan 2026 - Dec 2027
Relevant Coursework: Machine Learning (CSCI 567)

Amrita School of Engineering, India | B.Tech Computer Science (Artificial Intelligence) | CGPA: 8.25/10 | Jul 2019 - Jun 2023

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Go, Java, Kotlin, Dart, SQL, HTML, CSS
Web and Front End: React, Next.js, Node.js, Angular, Flutter, REST APIs, Responsive UI
Back End and Infrastructure: FastAPI, Flask, MongoDB, Elasticsearch, PostgreSQL, Microsoft Azure, AWS, Serverless, CI/CD, Git, GitHub
Engineering Practice: Debugging Live Systems, Root-Cause Analysis, Code Review and Pull Requests, Test Automation, Data Structures, Algorithms, Written Progress Updates, Jira
AI Tools and Agents: Claude, ChatGPT, GitHub Copilot, AI Agents, LLMs, RAG, Prompt Engineering

EXPERIENCE

Student Worker (Part-Time) | Keck Medicine of USC | Los Angeles, CA | Aug 2026 - Present
- Build a cross-platform medical transcription and translation app with a Flutter front end and a Python FastAPI backend on Microsoft Azure, using AI models to transcribe clinical conversations and translate them between languages.
- Ship prompt, evaluation, and release updates and debug issues across the stack to keep the live app reliable for clinical teams.

AI Research Intern | Keck Medicine of USC | Los Angeles, CA | May 2026 - Aug 2026
- Built and deployed AI agents with tool integration that automated manual workflows on live systems.

AI Test Engineer | Qualcomm | Mar 2025 - Dec 2025
- Debugged issues in LLMs across software versions, traced failures to their root causes, and logged them as clear Jira tickets for engineering teams.
- Built Python automation and testing pipelines that measured LLM accuracy and reliability on every new model version.
- Co-wrote an approved AI patent as co-inventor, and took part in internal hackathons.

Junior AI Developer | Ford Motor Company | Jul 2023 - Feb 2025 (Intern, Jan 2023 - Jun 2023)
- Built and shipped React and Angular front ends on Python REST APIs (FastAPI) and data pipelines over MongoDB and Elasticsearch for an internal AI platform used by business teams.
- Shipped through Git and CI/CD, took the platform from proof of concept to production, and wrote playbooks that helped new teams adopt it.

PROJECTS

Sports-Life: Web Application | Python, Flask, HTML, CSS (github.com/KiranKhanna721)
- Built a full-stack web app with dynamic page routing, form handling, error handling, and server-side data storage.

Android App with REST API Backend | Kotlin, Android, REST API
- Built a native Android app in Kotlin that calls a REST API backend and displays the returned data in the app.

LLM Fine-tuning and API | Python, PyTorch, Flask, REST API
- Fine-tuned an LLM, built a pipeline to compare it with the base model, and served it through a Flask REST API.

PATENTS, PUBLICATIONS AND AWARDS

- Co-Inventor, Approved AI Patent, Qualcomm (2025) | Two published research papers (2020, 2022) | Second Place, AI/ML, STEM Olympics (2021) | Honorable Mention, NASA Space Settlement Contest (2015)
